

forward · sampling $x = f_K \circ \dots \circ f_1(z)$

base $p_Z(z) = \mathcal{N}(0, I)$
simple · unimodal

data $p_X(x)$
complex · multimodal

$$\log p_X(x) = \log p_Z(z) + \sum_{k=1}^K \log \left| \det \frac{\partial f_k^{-1}}{\partial u} \right|$$

change of variables · tractable log-det per layer

affine coupling layer f_k (one block, unpacked)

triangular Jacobian $\Rightarrow \log|\det J_k| = \sum_i \log s_i$
