

A — 1-D piecewise-linear function

$f(x) = w_2 \cdot \text{ReLU}(W_1 x + b_1) + b_2$ — 5 hidden units $\rightarrow$ 5 kinks

continuous piecewise-linear: the network is affine on each region; region boundaries are exactly where some ReLU switches sign

B — 2-D polytope partition

5 first-layer units $\rightarrow$ 15 convex regions
