

## VGG-16 — repeated $3\times 3$ conv blocks · $2\times 2$ max-pool · dense head

Each block:  $n \times (3\times 3$  conv, pad 1, ReLU) then  $2\times 2$  max-pool, stride 2 · spatial halves, channels double · 13 conv + 3 FC = 16 weight layers ·  $\approx 138$ M parameters
